Wizard Speeds Installation

Custom Login Page with
Client Branding

Editable Disclaimer Page

Up to 250 Simultaneous
Internet Users

Controlled Access: Use
Codes Generated and
Managed on the Gateway

Reports of Access Code
Usage to Track Utilization

Features and Benefits

The WAVE WiFi's AP products provide a low-cost approach to providing managed Internet access for marinas and shipyards or any other business that wants to provide wireless Internet access to their customers.

The STAR-AP is a compact, unitized access point designed for indoor or outdoor applications. The unit's powerful signal and built-in directional antenna makes it ideal for restaurants and crew lounges.

The ROGUE-AP utilizes an external antenna to maximize coverage and range. The ROGUE-AP performs best with a patch or sector antenna. Sector antennas are available in 90°, 120° and 180° radiation patterns.

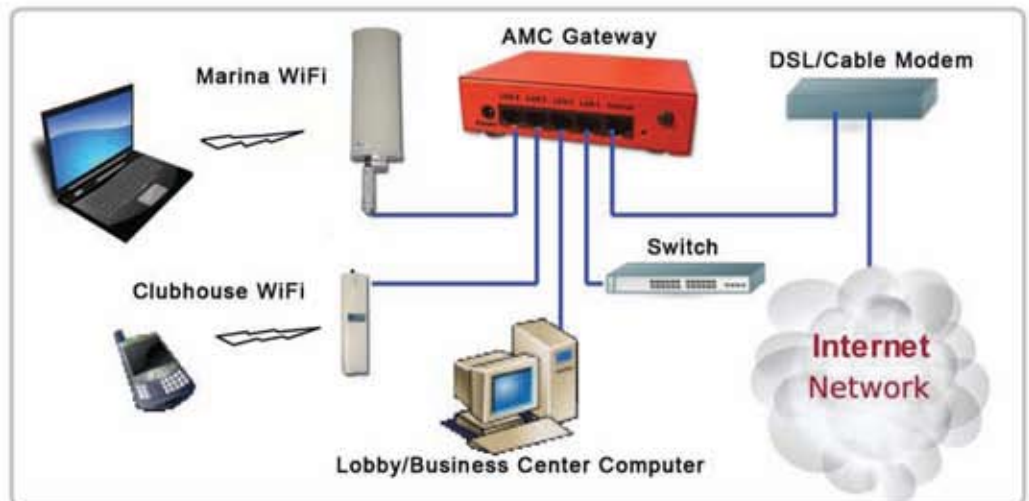

The heart of all WAVE WiFi Access Points is the AMC GATEWAY. The GATEWAY is a high performance gateway suitable for installations in computer networks that include wireless access points, hard-wired computers and switches.

The AMC GATEWAY can provide free Internet access with a disclaimer or control Internet access with access codes. The users enter an access code into the login page to connect to the Internet.

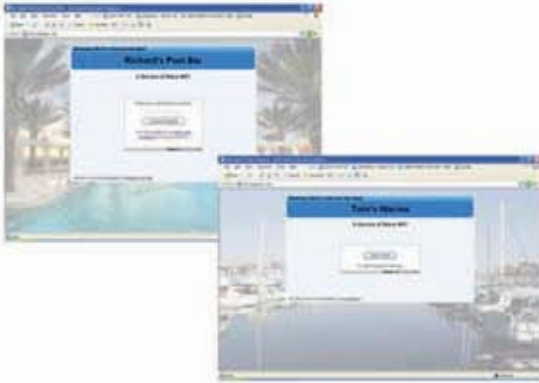

The GATEWAY has an access code generation and management page that is used to generate and delete codes. Access codes can be downloaded and printed. Authorized customers are given access codes to use the Internet.

The GATEWAY can manage up to 250 simultaneous Internet users.

Installation is simple - the AMC GATEWAY is connected to the Internet via the DSL or cable modem and a wireless access point is connected to the unit's LAN port. Opening the computer's browser starts the GATEWAY'S 'Setup Wizard.'

AMC GATEWAY Firmware Sample Login Pages

Setup Wizard Six easy to follow steps ...

(1) Introduction

(2) Test Internet Connection

(3) Setup HotSpot Name

(4) Login Page Background

(5) Set Access Level

(6) Setup Complete - Reboot

Software Features

Setup wizard:
