

Rogue Wave

The new Rogue Wave by Wave WiFi is an ultra small, compact Wireless Bridge and Ethernet Converter with an incredible 800mW output power.

NEW Rogue Wave
Extended Range WiFi

All the features and elements of the larger EC-Series like the user friendly, proprietary web-based interface are available in this easy to set-up kit.

The Rogue comes with a 9dB rubber duck antenna and is powered by Power over Ethernet (PoE). This means there is a single cable between the computer and the Rogue. The Rogue can also be used with variety of remote mount, 2.4 GHz omni-directional antennas.

Like all Wave WiFi models, the Rogue Wave is an Ethernet Converter (EC) so a direct connection can be made to any Ethernet enabled device and there is no software to install and no power robbing USB connections.

The ultra small size of the Rogue Wave makes it the ideal 'personal' Ethernet Converter/Wireless Bridge for boat captains and crew. The Rogue is perfect for wireless Internet access on a smaller boat or an RV.

Rogue Wave Features:

- 800mW (+29dBm) output power
- Easy to use web-based Interface
